7. What to Build Next	32

1. Why This System Exists

At Smart Pursuit, we operate as one strategist plus AI, taking on client work worth **Rs. 10L+ per month** in total portfolio value. At that scale, three things typically break down for a lean operator:

- **Inconsistency** — output quality depends on energy/mood that day instead of a repeatable process.
- **Invisible risk** — tracking errors, ad account bans, compliance gaps, and client-concentration risk build up silently until they become a crisis.
- **Blending into the commodity market** — without a deliberate system, proposals, ads and reports drift toward generic “agency-speak,” which caps pricing power.

This repository is not a content library — it is an **operating system**. Every function of an enterprise-grade agency (Sales → Onboarding → Strategy → Delivery → Operations → Finance → Retention → QA → Legal → Incident Response) is broken into a self-contained “skill”: a fixed input list, a fixed execution prompt, and a fixed output shape — so quality never depends on remembering the right prompt from memory.

The Three Lenses Behind Every Premium Deliverable

Lens	Question It Forces
Viewer / Customer	Would the real end-customer actually stop, feel something, and respond?
Competitor	Would a rival agency's reviewer find an easy reason to poach this client?
Behavioral / Psychological	Does it follow real decision-science principles — specificity, social proof, low friction — not just “look nice”?

2. How to Use It — The Standard Loop

Every skill file follows the same shape: **Purpose** → **When to Trigger** → **Inputs Required** → **Execution Prompt** → **Deliverable Template** → **Premium & QA Notes**. The standard way to run any skill:

1. Open the skill file matching your current task — use the Master Reference Table in Section 3 to find it fast.
2. Fill in the bracketed inputs. Keep a running “Client Brief” note per client so this takes seconds, not minutes.
3. Paste the Execution Prompt into any AI chat and run it.
4. If it's client-facing, run it a **second time** through the Multi-Perspective QA Checklist — as a fresh, separate session, not appended to the same conversation.
5. You make the final call. AI drafts; you decide. This is what clients are actually paying Smart Pursuit's premium for.

3. Quick Reference Table

A fast lookup across all 34 skills — use this to find the right skill in seconds. For full detail on any skill (exact inputs, what the AI is asked to do, and exactly what you get back), see Section 4: Detailed Skill Guide.

01 — Sales & Business Development

Skill	When to Trigger	Key Inputs	Time
Lead Generation & Prospecting	Weekly, standing pipeline activity	Niche, ICP revenue range, geography, service focus	20–30 min/wk
Discovery Call & Diagnostic	Every qualified lead, before proposal	Prospect name/site/industry, call notes	15 min + call
Case Study & Portfolio Building	After any meaningful result; quarterly	Client, situation, action, result, permission	20–30 min
Referral & Partnership Channel	Ongoing, from month 1	Your services, ICP, complementary providers list	30 min setup
Proposal, Pricing & Quoting	After discovery/audit complete	Client, industry, notes, budget, services, timeline	30–45 min
Negotiation & Closing	On objection/counter/silence	Objection text, deal value, margin floor	10–15 min

02 — Client Onboarding

Skill	When to Trigger	Key Inputs	Time
Onboarding, Contracts & Kickoff	Immediately after signature	Client, scope, retainer, start date, POC	30–45 min

03 — Strategy & Discovery

Skill	When to Trigger	Key Inputs	Time
Brand, Market & Competitor Audit	Start of engagement + quarterly	Client site, industry, competitor URLs, analytics	60–90 min

04 — Service Delivery

Skill	When to Trigger	Key Inputs	Time
SEO	Onboarding audit + monthly cycle	Website, target keywords, competitor URLs, GSC/GA	45–60 min
Paid Media (PPC)	Campaign setup + weekly/monthly	Budget, platform, target CPA/ROAS, offer, past data	45–60 min
Social Media Management	Monthly planning + execution	Platforms, brand voice, audience, monthly theme	60 min/mo
Content Marketing	Monthly, tied to SEO gaps	Client, industry, target topics, buyer-stage focus	45–60 min
Email Marketing & Automation	Onboarding + monthly campaigns	ESP/CRM, journey stages, offer, list size	45–90 min

Skill	When to Trigger	Key Inputs	Time
Web Design & Dev / CRO	New builds, landing pages, audits	Page purpose, audience, conversion goal, analytics	60–90 min
Branding & Creative Direction	Weak brand or standalone offer	Client, industry, current assets, audit findings	60 min
Analytics & Client Reporting	Monthly + dashboard setup	Services delivered, key metrics, raw exports	30–45 min/mo
Influencer & Creator Marketing	Awareness campaigns	Product, audience, budget, platform focus	45 min
Video Production & Short-Form	Monthly content/ad production	Platform, purpose, product/offer	45 min
Tracking & Measurement Infra.	Day 1–3 of onboarding + monthly	Website, platforms in use, conversion events	60–90 min once

05 — Operations & Project Mgmt

Skill	When to Trigger	Key Inputs	Time
Project Management (SDLC cycle)	Continuously — operating rhythm	Active clients, services per client, tool stack	30 min setup
Team/Freelancer/Vendor Mgmt	Near capacity or need a specialist	Task/role needed, budget, quality bar	30–45 min
Tool Stack & Tech Infrastructure	Agency setup + quarterly review	Services offered, tools budget, team size	60 min (rare)
Agency KPI / Business Health	Set up once, review monthly	Client list + retainers, capacity, pipeline	45 min setup

06 — Finance & Payments

Skill	When to Trigger	Key Inputs	Time
Pricing Models & Packaging	Agency setup + annual review	Services, target revenue, estimated costs	45–60 min
Invoicing & India Compliance	Contract signing + monthly	Client, amount, due date, GST status	20 min setup

07 — Retention & Growth

Skill	When to Trigger	Key Inputs	Time
Client Retention, QBRs & Upsell	Quarterly + continuous monitoring	Client, quarter data, current scope, unmet needs	60–90 min/qtr
Difficult Client Conversations	Whenever friction arises	Situation type, specific context	15–20 min

08 — Agency Positioning

Skill	When to Trigger	Key Inputs	Time
Positioning, USP & Premium Brand	Agency setup + every 6–12 mo	Strongest services, best results, target profile	90 min (rare)

09 — QA & Testing

Skill	When to Trigger	Key Inputs	Time
Multi-Perspective QA Checklist	Every client-facing deliverable	The draft + its goal + audience	15–20 min
Pre-Launch Campaign Compliance	Before every campaign launch	Platform, brief, creative, landing page, industry	20–30 min

10 — Legal & Compliance

Skill	When to Trigger	Key Inputs	Time
Contracts, IP & Legal Basics	Every new contract; annual review	Client, scope, term, jurisdiction	45 min + lawyer
Data Privacy / DPDP Compliance	Onboarding + new data touchpoint	Client, data types collected, tools handling data	45 min + legal

11 — Incident Response

Skill	When to Trigger	Key Inputs	Time
Incident Response Playbook	Immediately on ban/downtime/breach	Incident type, client, facts, time discovered	15–20 min

4. Detailed Skill Guide

Full detail for every skill in the system: exactly why it exists, when to reach for it, the precise inputs you hand the AI, what the execution prompt actually asks it to produce, and the exact shape of what you get back. This is the section to read the first time you run a skill you haven't used before.

01 — Sales & Business Development

Lead Generation & Prospecting

20–30 min/week

01-sales-bd/lead-generation-prospecting.md

PURPOSE

Build a predictable pipeline of qualified leads who can afford and value premium retainers (■1.5L–■5L+/month per client) — not high-volume, low-value leads.

WHEN TO USE IT

Weekly, as a standing pipeline activity — not just "when work is slow."

INPUTS YOU GIVE

- [NICHE/VERTICAL] (e.g., D2C skincare, B2B SaaS, real estate)
- [ICP_REVENUE_RANGE] (target client's annual revenue band)
- [GEOGRAPHY]
- [SERVICE_FOCUS] (which of your services you're leading with)

WHAT YOU RUN (the AI is asked to produce)

1. Give me 5 identifiable "buying signals" I can search for on LinkedIn, job boards, and news sites that indicate a company in this niche is about to invest in marketing (e.g., just raised funding, just hired a new CMO, job posting for "Growth Manager", recent negative reviews about their online presence, etc.)
2. For each signal, give me the exact search query/filter to find it.
3. Write 3 cold outreach message variants (LinkedIn DM, email, and a warm-intro ask) that lead with a specific, researched observation about their business — never a generic "we help businesses grow" opener.
4. Give me a weekly prospecting cadence (how many companies/day, follow-up sequence, timing) realistic for one person to execute alongside client work.

WHAT YOU GET BACK

- Buying Signal Matrix (signal → where to find it → search query) - 3 outreach message variants, each ≤120 words - Weekly cadence table (Day | Activity | Volume | Time required)

Discovery Call & Diagnostic Framework

15 min prep + call time

01-sales-bd/discovery-call-diagnostic.md

PURPOSE

Turn a first call into a diagnosis, not a pitch — this is the single biggest differentiator between a ■30K/month freelancer and a ■3L+/month strategic partner. You are the doctor, not the vendor.

WHEN TO USE IT

Every qualified inbound/outbound lead, before any proposal is written.

INPUTS YOU GIVE

- [PROSPECT_COMPANY], [PROSPECT_WEBSITE], [PROSPECT_INDUSTRY]
- Notes/transcript from the call (or pre-call research)

WHAT YOU RUN (the AI is asked to produce)

1. Based on their website and public presence, draft a 10-question discovery script covering: current revenue drivers, past marketing spend & ROI, internal team capability, decision-making process, budget authority, timeline pressure, and what "success" looks like to them in 6/12 months.
2. Include 3 "diagnostic" questions designed to surface a problem they haven't articulated yet (e.g., "Who owns your customer data today, and can you segment it by LTV?").
3. Draft a closing script for the call that does NOT pitch services, but instead proposes a paid or clearly-scoped "Strategic Audit" as the next step.
4. Give me 5 red-flag answers that should make me walk away from this prospect (budget mismatch, no decision authority, "we just need cheap volume", etc.)

WHAT YOU GET BACK

- 10-question discovery script (grouped by: Business Context / Past Marketing / Decision Process / Success Definition) - 3 diagnostic "surface the hidden problem" questions - Closing script (transition to paid audit, not free work) - Red-flag checklist

Case Study & Portfolio Building (Proof-Point Engine)

20–30 min

01-sales-bd/case-study-portfolio-building.md

PURPOSE

Solves the chicken-and-egg problem: proposals and positioning skills tell you to "back every claim with proof," but a new or scaling agency may not have many results yet. This skill turns even 1-2 early wins — or process/methodology alone — into credible proof, and systematizes case-study creation as an ongoing habit, not a one-time scramble.

WHEN TO USE IT

After every engagement hits a meaningful result (even a small one), and quarterly to refresh the portfolio.

INPUTS YOU GIVE

- [CLIENT_NAME — can be anonymized if needed], [STARTING_SITUATION], [WHAT_WAS_DONE], [RESULT_DATA], [CLIENT_PERMISSION: yes/no/anonymized only]

WHAT YOU RUN (the AI is asked to produce)

1. Write a case study in this structure: Challenge (1 para, specific, not generic) → Approach (3-4 bullet actions, not a service list) → Result (2-3 hard numbers, with timeframe) → Client Quote (if available; if not, write a placeholder marked [NEEDS CLIENT QUOTE] rather than inventing one).
2. Write a 1-sentence "punchline" version of this case study for use in proposals/pitches (e.g., "Took [Client]'s organic traffic from X to Y in 90 days without increasing content spend").
3. If results are modest or early-stage, give me 3 ways to present this credibly without exaggeration (e.g., lead with the process/methodology, use a % improvement even if absolute numbers are small, focus on speed of execution or a specific hard problem solved).
4. Give me a "No Case Study Yet" proof strategy: 3 alternative credibility builders to use with prospects before I have a strong portfolio (e.g., a free/paid audit as a live demonstration, a published point-of-view framework, a founder-led personal brand showing expertise in public).

WHAT YOU GET BACK

Full Case Study (Challenge/Approach/Result/Quote) → 1-Sentence Punchline → Modest-Results Framing Options → No-Case-Study-Yet Proof Strategy

Referral & Partnership Channel Development

30 min setup, 15 min/month

01-sales-bd/referral-partnership-channel.md

PURPOSE

Cold outreach alone caps growth and keeps every deal expensive to win. At the ■10L/month portfolio level, a referral/partnership channel typically becomes cheaper, higher-trust, and higher-close-rate than cold prospecting — this skill builds that channel deliberately instead of leaving it to chance.

WHEN TO USE IT

Ongoing, alongside cold outreach — build this from month 1, not after cold outreach plateaus.

INPUTS YOU GIVE

- [YOUR_SERVICES], [TARGET_CLIENT_PROFILE], list of complementary service providers you already know (web dev shops, PR firms, accountants, business consultants, etc.)

WHAT YOU RUN (the AI is asked to produce)

1. Partner-Type Map: list 5-6 categories of complementary (non-competing) service providers who already serve my target client BEFORE they need marketing (e.g., web dev agencies, business consultants/CAs, PR firms, ops/HR consultants, industry-specific SaaS vendors) — explain why each category is a strong referral source for this specific ICP.
2. Partner Outreach Script: a message to propose a referral relationship, framed around mutual client value (not "send me leads") — include a specific reciprocal offer (e.g., you refer clients needing web dev to them too).
3. Referral Fee/Incentive Structure: 2 options (one-time finder's fee vs. ongoing revenue share) with pros/cons of each for maintaining a sustainable partnership.
4. Partner Enablement One-Pager: what to give a referral partner so they can confidently describe what you do and to whom, without a full sales conversation on your behalf.

WHAT YOU GET BACK

Partner-Type Map (Category | Why they fit | Example targets) → Partner Outreach Script → Referral Incentive Structure Options → Partner Enablement One-Pager

Proposal Writing, Pricing & Quoting

30–45 min

01-sales-bd/proposal-pricing-quoting.md

PURPOSE

Produce proposals that read like strategic business cases, not service menus — designed to win ■1.5L–■5L+/month retainers.

WHEN TO USE IT

After discovery call + (ideally) paid audit is complete.

INPUTS YOU GIVE

- [CLIENT_NAME], [INDUSTRY], discovery call notes / audit findings
- [BUDGET_RANGE] (client-stated or inferred)
- [SERVICES_PROPOSED]
- [TIMELINE]

WHAT YOU RUN (the AI is asked to produce)

1. Situation Summary — reflect back their business situation in their own language + 2-3 data points from their industry (use real, cited stats where possible, not invented numbers).
2. The Core Problem — one clear, sharply-worded diagnosis (not a list of 10 problems — pick the ONE that matters most).
3. Recommended Approach — 3 phases (30/60/90 days), each with a name, objective, and 3-4 concrete actions. No jargon like "synergy" or "holistic".
4. Investment — present [2-3] pricing options structured as Retainer + Performance Bonus (not flat project fee), each with what's included and projected outcome ranges (ranges, not guarantees).
5. Why Us — 3 sentences max, backed by a specific proof point (case study, number, or process advantage) — never generic claims like "we're passionate".

6. Next Step — one single, low-friction call-to-action with a deadline. Keep total length under 1000 words. Write for a time-poor decision-maker.

WHAT YOU GET BACK

Situation Summary → Core Problem → 3-Phase Approach → Investment table (3 tiers) → Why Us → Next Step (with expiry date on the offer)

Negotiation & Closing

10–15 min

01-sales-bd/negotiation-closing.md

PURPOSE

Protect premium pricing while closing deals — avoid the two failure modes: discounting into unprofitability, or losing deals by being rigid.

WHEN TO USE IT

After proposal is sent and client responds with objections, silence, or a counter.

INPUTS YOU GIVE

- [OBJECTION_TEXT] (what the client actually said)
- [DEAL_VALUE], [MARGIN_FLOOR] (your minimum acceptable price)

WHAT YOU RUN (the AI is asked to produce)

1. Classify the objection: Price / Trust / Timing / Authority / Fit.
2. Give me a response script that does NOT immediately discount — instead, trades scope, timeline, or payment terms for any price movement.
3. Give me one "walk-away" version of the response, for use if this is a low-value prospect not worth chasing.
4. Give me a follow-up sequence (3 touches over 2 weeks) if the client goes silent after the proposal.

WHAT YOU GET BACK

Objection type → Primary response script → Trade-off options table (what you give up if price drops) → Walk-away script → Silent-prospect follow-up sequence

02 — Client Onboarding

Client Onboarding, Contracts & Kickoff

30–45 min

02-client-onboarding/onboarding-contracts-kickoff.md

PURPOSE

Convert a signed deal into a smoothly running engagement in under 7 days, setting expectations that prevent scope creep and protect the relationship for 12+ months.

WHEN TO USE IT

Immediately after contract signature, before any work begins.

INPUTS YOU GIVE

- [CLIENT_NAME], [SERVICES_SCOPE], [MONTHLY_RETAINER], [START_DATE], [POINT_OF_CONTACT]

WHAT YOU RUN (the AI is asked to produce)

1. Build a 7-day onboarding checklist (Day 1 to Day 7) covering: contract/ payment confirmation, access collection (ad accounts, analytics, CMS, socials, brand assets), kickoff call agenda, internal brief creation, and first-week deliverable.
2. Draft a Kickoff Call Agenda (45 min) with time-boxed sections.
3. Draft an "Access Request" checklist email listing every platform/credential needed for [SERVICES_SCOPE], with a note on secure handling (no passwords over email/chat — use a password manager share link).

4. Draft a "Working Together" one-pager covering: communication channels & response times, reporting cadence, revision policy, and escalation path.

WHAT YOU GET BACK

- 7-Day Onboarding Checklist (table: Day | Task | Owner) - Kickoff Call Agenda - Access Request Checklist (with secure-sharing instructions) - "Working With Us" one-pager (client-facing PDF-ready doc)

03 — Strategy & Discovery

Brand, Market & Competitor Audit

60–90 min

03-strategy-discovery/brand-market-competitor-audit.md

PURPOSE

This is the "Requirements + Design" phase — before any campaign or asset is built, understand the client's business, market, and competitive landscape well enough to make decisions no generic agency would arrive at.

WHEN TO USE IT

Start of every new engagement, and every quarter thereafter as a refresh.

INPUTS YOU GIVE

- [CLIENT_NAME], [CLIENT_WEBSITE], [INDUSTRY]
- [3-5 COMPETITOR_NAMES/WEBSITES]
- Access to client's analytics/ad accounts (if available)

WHAT YOU RUN (the AI is asked to produce)

1. Brand Positioning Snapshot — what [CLIENT_NAME] currently claims to stand for (from their website/messaging) vs. what evidence supports that claim.
2. Competitor Teardown — for each competitor: their core message, primary channel focus, apparent budget tier (low/mid/high production quality), and one exploitable weakness in their marketing.
3. White Space Analysis — what message, channel, or audience segment is NOT being addressed by anyone in this competitive set.
4. Customer Perspective Simulation — write 3 short "day in the life" personas of the target customer, and for each, identify the exact moment they'd decide between [CLIENT_NAME] and a competitor, and why.
5. Recommended Strategic Angle — the ONE positioning angle [CLIENT_NAME] should own, backed by points 1-4 (not a generic "focus on quality" answer).

WHAT YOU GET BACK

Brand Snapshot → Competitor Teardown Table (Competitor | Message | Channel Focus | Budget Tier | Weakness) → White Space Map → 3 Customer Personas with Decision Moments → Recommended Strategic Angle (1 paragraph, sharp)

04 — Service Delivery

SEO (Technical, On-Page & Content)

45–60 min

04-service-delivery/seo.md

PURPOSE

Deliver SEO that produces ranking + revenue movement in 90-180 days, backed by a defensible technical process — not "we submit your sitemap and write blogs."

WHEN TO USE IT

Client onboarding (initial audit) + monthly execution cycle.

INPUTS YOU GIVE

- [CLIENT_WEBSITE], [TOP_5_TARGET_KEYWORDS_OR_TOPICS], [COMPETITOR_URLS], current GSC/GA data if available

WHAT YOU RUN (the AI is asked to produce)

1. Technical Audit Checklist: crawlability, indexation, Core Web Vitals, mobile usability, structured data, internal linking — flag likely issues based on the site's structure/CMS (note: confirm actual scores with PageSpeed Insights / Search Console before reporting to client).
2. Content Gap Analysis: topics/keywords competitors likely rank for that [CLIENT_WEBSITE] doesn't cover, based on their visible site structure.
3. 90-Day SEO Roadmap: Month 1 (technical fixes + foundation), Month 2 (content production + on-page), Month 3 (authority building + internal linking + refresh).
4. Content Brief Template for one target keyword — search intent, target word count range, required subtopics/headers, internal link targets, and a meta title/description (under 60/155 chars).

WHAT YOU GET BACK

Technical Audit Checklist (with severity: Critical/High/Medium) → Content Gap Table → 90-Day Roadmap (Month | Focus | Deliverables | KPI) → Sample Content Brief

Paid Media (Google, Meta, LinkedIn Ads)

45–60 min

04-service-delivery/ppc-paid-media.md

PURPOSE

Run paid media as a profit center for the client, with transparent, defensible reporting — the #1 area where agencies lose client trust due to vague reporting.

WHEN TO USE IT

Campaign setup, and every optimization cycle (weekly review, monthly strategy).

INPUTS YOU GIVE

- [CLIENT_NAME], [MONTHLY_AD_BUDGET], [PLATFORM(S)], [TARGET_CPA_OR_ROAS], [PRODUCT/OFFER], [PAST_CAMPAIGN_DATA if available]

WHAT YOU RUN (the AI is asked to produce)

1. Campaign Architecture: recommend campaign structure (types, ad sets/groups, budget split %) with reasoning for each split.
2. Audience Strategy: 3 audience segments to test (cold/warm/retargeting) with estimated relative size and expected funnel role.
3. Ad Creative Brief: for each segment, 2 ad angle concepts (hook + core message + CTA) - each grounded in a specific customer pain point or desire, not generic "shop now" messaging.
4. Testing Plan: what variable to test first (creative/audience/offer), minimum spend/time needed before a valid read, and kill criteria.
5. Weekly Reporting Template: the exact metrics to report, in what order, with a "so what" narrative line for each (not just a raw metrics table).

WHAT YOU GET BACK

Campaign Architecture diagram/table → Audience Segments table → Ad Creative Briefs (2 per segment) → Testing Plan (Variable | Budget/Time Needed | Kill Criteria) → Weekly Report Template

Social Media Management & Strategy

60 min/month

04-service-delivery/social-media-management.md

PURPOSE

Move beyond "posting content" into building an owned audience asset that reduces the client's paid acquisition dependency over time.

WHEN TO USE IT

Monthly content planning cycle + daily/weekly execution.

INPUTS YOU GIVE

- [CLIENT_NAME], [PLATFORMS], [BRAND_VOICE_NOTES], [TARGET_AUDIENCE], [MONTHLY_THEME/CAMPAIGN if any]

WHAT YOU RUN (the AI is asked to produce)

1. Content Pillars: define 4-5 content pillars (e.g., Education, Social Proof, Behind-the-Scenes, Product, Community) with a % split and the business reason for each pillar's weighting.
2. 30-Day Content Calendar: platform | date | pillar | hook/topic | format (reel/carousel/static/story) | CTA. Vary formats — do not repeat the same post structure more than twice in a row.
3. For 5 highest-priority posts, write full copy + a shot-list/design brief for the visual.
4. Community Management SOP: response time targets, tone guide for comments/DMs, and escalation triggers (complaints, PR risk).

WHAT YOU GET BACK

Content Pillar breakdown (with %) → 30-Day Calendar (table) → 5 Full Post Drafts with visual briefs → Community Management SOP

Content Marketing (Blog, Long-Form, Thought Leadership)

45–60 min

04-service-delivery/content-marketing.md

PURPOSE

Build compounding organic assets and brand authority — content that ranks, gets shared, and shortens the sales cycle for the client's own sales team.

WHEN TO USE IT

Monthly content planning, tied to SEO content gap analysis and sales team FAQs.

INPUTS YOU GIVE

- [CLIENT_NAME], [INDUSTRY], [TARGET_KEYWORDS/TOPICS], [BUYER_STAGE_FOCUS] (awareness/consideration/decision)

WHAT YOU RUN (the AI is asked to produce)

1. Content Matrix: map [TARGET_KEYWORDS/TOPICS] against buyer stage (Awareness/Consideration/Decision) and content format (blog, guide, case study, comparison page, calculator/tool).
2. For the top 3 priority pieces, write a full content brief: target reader, the ONE belief the piece must change by the end, structure/outline with H2s, and a distribution plan (where else this gets repurposed — LinkedIn, email, sales collateral).
3. Draft the opening 150 words of the #1 priority piece, written to earn attention in the first 2 sentences (no throat-clearing intros).
4. Give a repurposing map: how 1 long-form piece becomes 5+ additional assets (social posts, email, short video script, infographic data points).

WHAT YOU GET BACK

Content Matrix table → 3 Full Content Briefs → Sample Opening (150 words) → Repurposing Map (1-to-many diagram/table)

Email Marketing & Marketing Automation / CRM

45–90 min

04-service-delivery/email-marketing-automation.md

PURPOSE

Turn email/CRM into the highest-ROI channel in the client's stack — automation sequences that sell while you sleep.

WHEN TO USE IT

Onboarding (build core flows) + monthly campaign calendar.

INPUTS YOU GIVE

- [CLIENT_NAME], [ESP/CRM_PLATFORM], [CUSTOMER_JOURNEY_STAGES], [PRODUCT/OFFER], [LIST_SIZE if known]

WHAT YOU RUN (the AI is asked to produce)

1. Core Automation Flows: define the essential flows for this business (e.g., Welcome, Abandoned Cart, Post-Purchase, Win-Back, Lead Nurture) — only recommend flows relevant to their actual business model.
2. For the 2 highest-impact flows, write the full email sequence (subject lines + preview text + full body copy for each email + timing/delay between emails).
3. Segmentation Strategy: how to segment [LIST_SIZE] contacts by engagement/purchase behavior for more relevant sending.
4. Deliverability Checklist: sender reputation, authentication (SPF/DKIM/DMARC), list hygiene practices to keep inbox placement high.

WHAT YOU GET BACK

Flow Priority Map → 2 Full Email Sequences (subject/preview/body/timing) → Segmentation Plan → Deliverability Checklist

Web Design & Development (Landing Pages, Websites, CRO)

60–90 min

04-service-delivery/web-design-dev.md

PURPOSE

Ship websites/landing pages that convert, not just look good — this is a frequent upsell into ■1L-5L project fees on top of retainers.

WHEN TO USE IT

New site builds, landing page campaigns, or CRO audits on existing sites.

INPUTS YOU GIVE

- [CLIENT_NAME], [PAGE_PURPOSE] (site/landing page/funnel), [TARGET_AUDIENCE], [PRIMARY_CONVERSION_GOAL], existing analytics if available

WHAT YOU RUN (the AI is asked to produce)

1. Page Structure/Wireframe (section by section): for each section, define its single job (e.g., Hero: earn 5 more seconds of attention; Section 2: resolve the #1 objection), and the specific content/element it needs.
2. Above-the-fold Copy: headline + subheadline + CTA button text — test 3 headline variants using different angles (outcome-led, curiosity-led, social-proof-led).
3. CRO Checklist: page speed, mobile responsiveness, trust signals (reviews/ logos/certifications), form friction (fields to remove), and exit-intent opportunities.
4. Technical Requirements Doc: recommended stack/CMS, integrations needed (CRM, analytics, payment), and a realistic timeline with milestones.

WHAT YOU GET BACK

Section-by-Section Wireframe Outline → 3 Headline Variants + Hero Copy → CRO Checklist → Technical Requirements & Timeline

Branding & Creative Direction

60 min

04-service-delivery/branding-creative.md

PURPOSE

Provide brand-level thinking (positioning, voice, visual identity direction) that justifies premium pricing beyond execution-only services.

WHEN TO USE IT

New client with weak/inconsistent brand, or as a standalone premium project offer.

INPUTS YOU GIVE

- [CLIENT_NAME], [INDUSTRY], [CURRENT_BRAND_ASSETS if any], findings from 03-strategy-discovery audit

WHAT YOU RUN (the AI is asked to produce)

1. Brand Positioning Statement: "For [target], [Client] is the [category] that [unique benefit] because [reason to believe]" — 2 versions to choose from.
2. Voice & Tone Guide: 4-5 voice attributes (e.g., "confident, not arrogant") with a do/don't example sentence for each.
3. Visual Direction Brief (for a designer, not final design): mood/tone references, color psychology rationale, typography direction, and what to explicitly avoid (e.g., "avoid stock-photo aesthetic common in this industry").
4. Messaging House: one-line tagline options (5), elevator pitch (30 sec), and 3 proof points to back the core claim.

WHAT YOU GET BACK

Positioning Statement (2 versions) → Voice & Tone Guide (table) → Visual Direction Brief → Messaging House (tagline options / elevator pitch / proof points)

Analytics, Attribution & Client Reporting

30–45 min/month

04-service-delivery/analytics-reporting.md

PURPOSE

Reporting is the #1 retention lever — clients rarely leave agencies that clearly show ROI, and rarely stay with ones that don't, regardless of actual performance.

WHEN TO USE IT

Monthly (standing report) + real-time dashboard setup at onboarding.

INPUTS YOU GIVE

- [CLIENT_NAME], [SERVICES_DELIVERED], [KEY_METRICS], raw data exports (GA4/Ads/CRM)

WHAT YOU RUN (the AI is asked to produce)

1. Executive Summary: 3-4 sentences, plain English, leading with the single most important number this month and what it means for their business (revenue/leads/cost — not vanity metrics like impressions alone).
2. Channel-by-Channel Breakdown: metric table + one "so what" insight sentence per channel — never just a metrics dump.
3. What We Changed & Why: 2-3 optimizations made this month and the hypothesis behind each.
4. Next Month's Focus: 2-3 priorities with expected impact.
5. Flag one risk or watch-item proactively (declining metric, rising CPC, seasonality) — surfacing bad news first builds more trust than clients discovering it themselves.

WHAT YOU GET BACK

Executive Summary → Channel Breakdown Table with Insights → Changes Made & Rationale → Next Month Focus → Risk/Watch Flag

Influencer & Creator Marketing

45 min

04-service-delivery/influencer-marketing.md

PURPOSE

Run influencer campaigns with measurable ROI and vetted creators — differentiate from agencies that just "send products to influencers."

WHEN TO USE IT

Campaign planning for awareness/consideration-stage goals, or client-requested influencer push.

INPUTS YOU GIVE

- [CLIENT_NAME], [PRODUCT/OFFER], [TARGET_AUDIENCE], [BUDGET], [PLATFORM_FOCUS]

WHAT YOU RUN (the AI is asked to produce)

1. Creator Tiering Strategy: recommend a mix across nano/micro/mid/macro creators with budget allocation % and the specific role each tier plays (reach vs. trust vs. conversion).
2. Vetting Checklist: red flags for fake engagement/followers, audience-fit checks, and past brand-safety concerns to screen for.
3. Brief Template for creators: campaign goal, key message (not scripted lines — creators' authentic voice converts better), required disclosures (ad/sponsored per platform policy), deliverables, usage rights terms.
4. Performance Tracking Plan: UTM/promo code structure per creator, and the metrics that separate "impressions vanity" from real business impact.

WHAT YOU GET BACK

Creator Tier Allocation table → Vetting Checklist → Creator Brief Template → Tracking Plan (UTM/code structure)

Video Production & Short-Form Content Strategy

45 min

04-service-delivery/video-production.md

PURPOSE

Produce scroll-stopping short-form video (Reels/Shorts/TikTok-style) and ad video at a system level — scripts and structure that a freelance editor/videographer can execute against, so you don't need to be the videographer yourself.

WHEN TO USE IT

Monthly content/ad production cycle.

INPUTS YOU GIVE

- [CLIENT_NAME], [PLATFORM], [VIDEO_PURPOSE] (brand/ad/educational), [PRODUCT/OFFER]

WHAT YOU RUN (the AI is asked to produce)

1. Hook Bank: 8 opening lines/visuals designed to stop the scroll in the first 1.5 seconds, using different angles (pattern interrupt, bold claim, question, relatable problem, controversy/contrarian take).
2. For the top 3 hooks, write a full script (hook → build → payoff → CTA) with on-screen text cues and suggested shot list for an editor/videographer.
3. Editing Brief: pacing notes (cut frequency), music/sound direction, caption style, and platform-specific specs (aspect ratio, length, safe zones).
4. Repurposing Plan: how one produced video gets cut into 3+ additional assets (different hooks on same footage, static quote-card excerpts, etc.)

WHAT YOU GET BACK

Hook Bank (8 options) → 3 Full Scripts with Shot Lists → Editing Brief → Repurposing Plan

Tracking & Measurement Infrastructure (Analytics Foundation)

60–90 min once,
15 min/month
audit

04-service-delivery/tracking-measurement-infrastructure.md

PURPOSE

Every other reporting/optimization skill in this repo assumes clean data. This skill IS that assumption — it builds and verifies the tracking foundation before a single rupee of ad spend or a single report goes out. Bad tracking is the single most common cause of agency-client trust breakdown (your number ≠ their number).

WHEN TO USE IT

Day 1-3 of onboarding (before any campaign launches or first report is due), and audited monthly.

INPUTS YOU GIVE

- [CLIENT_WEBSITE], [PLATFORMS_IN_USE] (GA4, Meta Pixel, Google Ads, CRM, etc.), [KEY_CONVERSION_EVENTS] (purchase, lead form, call, signup)

WHAT YOU RUN (the AI is asked to produce)

1. Tracking Audit Checklist: GA4 property setup correctness, conversion event configuration, Meta Pixel + Conversions API (server-side) status, Google Ads conversion tracking/tag linkage, cross-domain tracking if applicable, consent mode / cookie banner impact on data collection.
2. UTM Governance Standard: a fixed naming convention (source/medium/campaign/ content) that every channel (paid, email, social, influencer) must follow, so campaign-level reporting is comparable across channels without manual cleanup.
3. Conversion Definition Doc: for each of [KEY_CONVERSION_EVENTS], define exactly what fires it, its value (if e-commerce), and which platform is the "source of truth" when platforms disagree (recommend: CRM/backend data as source of truth for revenue, ad platforms for cost/efficiency signals).
4. Data Discrepancy Playbook: the 3 most common reasons GA4, Meta, and Google Ads numbers won't match each other (attribution windows, view-through vs click-through, bot filtering) and the explanation script to give a client who asks "why don't these numbers match?"

WHAT YOU GET BACK

Tracking Audit Checklist (Pass/Fail/Needs Fix per item) → UTM Naming Convention Doc → Conversion Definition Table (Event | Trigger | Value | Source of Truth) → Discrepancy Explanation Script

05 — Operations & Project Management

Project Management (SDLC-Style Delivery Cycle)

30 min setup,
ongoing use

05-operations-pm/project-management-sdlc.md

PURPOSE

Run every client engagement like a software delivery cycle — Discover → Design → Build → Test → Deploy → Maintain — so nothing gets delivered without a QA gate, and one person can manage 3-6 concurrent retainers without dropping balls.

WHEN TO USE IT

Continuously — this is the operating rhythm of the whole agency.

INPUTS YOU GIVE

- [NUMBER_OF_ACTIVE_CLIENTS], [SERVICES_PER_CLIENT], current tool stack

WHAT YOU RUN (the AI is asked to produce)

1. Map our service delivery to an SDLC-style cycle for a MONTHLY retainer: Discover (data review) → Design (plan the month) → Build (execute) → Test (QA gate) → Deploy (publish/launch) → Maintain (report + optimize). Give me the ideal day-of-month for each phase, per client, so phases don't collide across multiple clients.
2. Build a weekly operating rhythm (Mon-Fri) that blocks time for: deep work (strategy/creative), client communication, QA review, and pipeline/sales activity — realistic for one operator.
3. Give me a RACI-style breakdown of what AI can own outright vs. what requires my direct judgment/approval at each phase.
4. Design a capacity-check formula: how do I know I'm at risk of overloading before accepting the next client?

WHAT YOU GET BACK

Monthly SDLC Cycle Calendar (per client) → Weekly Operating Rhythm table → AI-vs-Human RACI table per phase → Capacity Check Formula

Team, Freelancer & Vendor Management

30–45 min per hire

05-operations-pm/team-freelancer-vendor-management.md

PURPOSE

Scale delivery capacity beyond one person's hours without losing quality control — critical once you're running multiple ■1.5L+/month retainers.

WHEN TO USE IT

When capacity check (from project-management skill) signals you're near limit, or a specialized skill (video editing, design, dev) is needed.

INPUTS YOU GIVE

- [TASK/ROLE_NEEDED], [BUDGET_PER_TASK_OR_MONTHLY], [QUALITY_BAR_EXAMPLES]

WHAT YOU RUN (the AI is asked to produce)

1. Write a job brief/scope doc for this role: deliverables, required skill proof (portfolio ask), and a paid test-task to evaluate quality before committing to ongoing work.
2. Give me a screening rubric (5 criteria, weighted) to evaluate applicants objectively rather than on gut feel alone.
3. Draft a Statement of Work / freelancer agreement template covering scope, payment terms, IP ownership (agency/client owns all work product), and confidentiality.
4. Give me a quality-control checkpoint process: how I review their output before it reaches a client, without becoming a bottleneck myself.

WHAT YOU GET BACK

Job Brief with Paid Test Task → Screening Rubric → Freelancer SOW/Agreement Template → QC Checkpoint Process

Tool Stack & Tech Infrastructure

60 min (rare)

05-operations-pm/tool-stack-tech.md

PURPOSE

Run a lean, professional tech stack that looks and performs enterprise-grade without enterprise overhead cost — critical for solo/lean-team operators.

WHEN TO USE IT

Agency setup, and quarterly review as needs grow.

INPUTS YOU GIVE

- [SERVICES_OFFERED], [CURRENT_BUDGET_FOR_TOOLS], [TEAM_SIZE]

WHAT YOU RUN (the AI is asked to produce)

1. Project management / client portal
2. Proposal & e-signature
3. Invoicing & accounting (India: GST-compliant)
4. Analytics/reporting dashboard (cross-platform)
5. Design/creative collaboration
6. Password/credential sharing (client access security)
7. CRM/pipeline tracking
8. Internal knowledge base (storing these skill files + SOPs + client briefs) For each, note: monthly cost tier, why it fits a lean/solo operation, and migration difficulty if outgrown later.

WHAT YOU GET BACK

Tool Stack Table (Category | Primary Pick | Budget Alternative | Monthly Cost Tier | Why | Migration Notes)

Agency Business Health Dashboard (KPIs Beyond Cash Flow)

45 min setup, 15 min/month

05-operations-pm/agency-kpi-dashboard.md

PURPOSE

The finance skill tracks cash flow (money in/out). This tracks whether the AGENCY ITSELF is healthy — revenue quality, capacity risk, and client concentration risk — the metrics that predict whether ■10L/month is sustainable or fragile.

WHEN TO USE IT

Set up once, review monthly.

INPUTS YOU GIVE

- Current client list with retainer values, team/freelancer capacity, pipeline status

WHAT YOU RUN (the AI is asked to produce)

1. Core KPI List with formulas: MRR (Monthly Recurring Revenue), client concentration risk (% of revenue from single largest client — flag if over 25-30%), average retainer value, gross margin per client (retainer minus direct costs: tools, freelancers, ad spend management overhead), utilization rate (capacity used vs. available), pipeline coverage ratio (pipeline value vs. revenue target).
2. Build a simple monthly dashboard structure (spreadsheet-ready: rows = metrics, columns = last 3 months + trend) I can maintain in 15 minutes/month.
3. Flag 3 early-warning thresholds specific to a solo/lean agency (e.g., "if any single client exceeds 30% of revenue, prioritize new client acquisition even if at capacity") and what action to take when each is crossed.
4. Give a simple formula for "true hourly value" per client (retainer minus costs, divided by hours actually spent) so I can spot underpriced clients quietly eating margin.

WHAT YOU GET BACK

KPI List with Formulas → Monthly Dashboard Template Structure → Early-Warning Thresholds + Actions → True Hourly Value Formula

06 — Finance & Payments

Pricing Models & Service Packaging

45–60 min (rare)

06-finance-payments/pricing-models-packages.md

PURPOSE

Design pricing that supports a ■10L+/month portfolio (3-6 retainers, not 20 small clients) with margins that survive taxes, tools, and freelancer costs.

WHEN TO USE IT

Agency setup, and annual pricing review.

INPUTS YOU GIVE

- [SERVICES_OFFERED], [TARGET_MONTHLY_REVENUE], [ESTIMATED_MONTHLY_COSTS] (tools, freelancers, etc.)

WHAT YOU RUN (the AI is asked to produce)

1. Recommend a packaging structure: 3 tiers (e.g., Growth / Scale / Enterprise) with what's included in each, and a suggested price range for each tier appropriate for the Indian mid-market/enterprise segment.
2. Recommend a hybrid pricing model: base retainer + performance bonus structure (e.g., % of ad spend managed, or bonus tied to agreed KPIs) — explain when performance components make sense vs. when to avoid them.
3. Reverse-engineer: how many clients at what average retainer size are needed to hit [TARGET_MONTHLY_REVENUE], at 2-3 different portfolio mixes (e.g., "3 large + 2 small" vs "5 medium").

4. Give me 3 principles for when and how to raise prices with existing clients without triggering churn.

WHAT YOU GET BACK

3-Tier Package Table (Tier | Included Services | Price Range | Ideal Client Profile) → Hybrid Pricing Model
Explanation → Portfolio Math (mix scenarios to hit revenue target) → Price-Increase Playbook

Invoicing, Payment Terms & India Compliance Basics

20 min setup, 5
min/month

06-finance-payments/invoicing-payments-india.md

PURPOSE

Get paid on time, every time, with clean, compliant documentation — cash-flow discipline is what actually keeps an agency alive, not just revenue.

WHEN TO USE IT

Contract signing (set terms), monthly (invoicing cycle), and any late-payment situation.

INPUTS YOU GIVE

- [CLIENT_NAME], [MONTHLY_RETAINER_AMOUNT], [PAYMENT_DUE_DATE], [GST_REGISTERED: yes/no]

WHAT YOU RUN (the AI is asked to produce)

1. Draft a standard payment terms clause for contracts: due date, late fee %, work-pause clause if payment is overdue beyond X days, and advance-payment requirement for new clients (recommend a %).
2. Draft an invoice template structure appropriate for India (GST line items if applicable, HSN/SAC code placeholder, TDS note for the client to account for their deduction obligation under Section 194J/194C as applicable — flag that I should confirm exact section with a CA).
3. Draft a polite-but-firm late payment follow-up sequence (3 stages: friendly reminder → firm reminder with late fee notice → work-pause notice).
4. Give me a simple monthly cash-flow tracking structure (expected in, actual in, overdue, upcoming costs) I can run in a spreadsheet.

WHAT YOU GET BACK

Payment Terms Clause → Invoice Template Structure → 3-Stage Late Payment Sequence → Cash-Flow Tracker Structure

07 — Retention & Growth

Client Retention, QBRs & Upsell Strategy

60–90 min/quarter

07-retention-growth/client-retention-upsell-qbr.md

PURPOSE

Retention and expansion are cheaper and more profitable than new sales — a ■10L/month portfolio is far easier to sustain by growing 5 existing clients than by constantly replacing churned ones.

WHEN TO USE IT

Quarterly (formal QBR), and continuously (upsell-readiness monitoring).

INPUTS YOU GIVE

- [CLIENT_NAME], 1 quarter of performance data, [CURRENT_SCOPE], [UNMET_NEEDS observed]

WHAT YOU RUN (the AI is asked to produce)

1. QBR Deck Outline: Quarter Recap (wins + misses, honestly) → Key Learnings → Next Quarter Strategic Priorities → Investment Recommendation (if applicable).
2. Identify 2 natural upsell opportunities based on [UNMET_NEEDS] or performance data (e.g., "SEO is compounding — this is the moment to add content production") — each framed as solving a problem, not selling a service.

3. Draft the QBR talking points/script for presenting the upsell without it feeling like a sales pitch.
4. Give me 5 early-warning signs of client dissatisfaction/churn risk to monitor between QBRs (response time delays, reduced engagement on calls, questioning every invoice, etc.)

WHAT YOU GET BACK

QBR Deck Outline (4 sections) → 2 Upsell Opportunities (framed as problem-solving) → QBR Talking Points → Churn Risk Early-Warning Checklist

Difficult Client Conversations (Mid-Engagement Friction)

15–20 min

07-retention-growth/difficult-client-conversations.md

PURPOSE

The negotiation-closing skill covers pre-sale objections. This covers what actually happens more often once you're delivering: scope creep requests, missed targets, unrealistic demands, and invoice disputes — handled in a way that protects both the relationship and your margin/boundaries.

WHEN TO USE IT

Whenever one of these situations arises mid-engagement.

INPUTS YOU GIVE

- [SITUATION_TYPE] (scope creep / missed target / unrealistic guarantee demand / invoice dispute / relationship strain), [SPECIFIC_CONTEXT]

WHAT YOU RUN (the AI is asked to produce)

1. Reframe the situation in one sentence — what is the client actually worried about underneath the surface complaint (usually: fear of wasted money, fear of looking bad internally, or loss of control)?
2. Response Script: acknowledge the concern genuinely first (no defensive opening), then address it factually, then propose a specific next step — never leave a difficult conversation without a concrete next action.
3. For scope creep specifically: a script that says yes to the underlying need while pricing/timeline for the additional scope, without sounding like "that's not in my contract."
4. For missed targets specifically: a script that owns the miss without over-apologizing, explains the specific factor(s), and pivots immediately to the corrective plan (data-backed, not vague reassurance).
5. Escalation Threshold: 3 signs this relationship has moved from "difficult but salvageable" to "not worth continuing" — and a professional off-ramp script for that scenario.

WHAT YOU GET BACK

Underlying Concern Reframe → Response Script → Scope-Creep-Specific Script → Missed-Target-Specific Script → Escalation/Off-Ramp Criteria + Script

08 — Agency Positioning

Agency Positioning, USP & Premium Brand-of-You

90 min (rare)

08-agency-positioning/positioning-usp-premium-brand.md

PURPOSE

This is the meta-skill: how the agency itself is positioned so it never gets compared apples-to-apples with commodity agencies on a rate-card — the single biggest lever for reaching ■10L+/month without a large team.

WHEN TO USE IT

Agency setup, and revisited every 6-12 months or when pricing feels like it's hitting a ceiling.

INPUTS YOU GIVE

- [YOUR_STRONGEST_SERVICES], [YOUR_BEST_RESULTS/CASE_STUDIES so far], [TARGET_CLIENT_PROFILE]

WHAT YOU RUN (the AI is asked to produce)

1. Recommend a narrow positioning statement: "The [category] agency for [specific niche/problem]" — narrower than "full-service digital marketing agency". Explain why narrow positioning commands higher prices than broad positioning, with the trade-off made explicit.
2. Give me 3 proof-point formats to build credibility fast even with a short track record: outcome-based case studies (even 1-2 strong ones), a published point-of-view/framework with your name on it, and a specific guarantee or process no generic agency offers.
3. Draft an "About/Manifesto" statement (150 words) that would make a time-poor CMO think "this isn't a vendor, this is a partner" within the first 2 sentences.
4. Give me 3 things to deliberately NOT do that most agencies do (e.g., don't have a generic "services" page listing 15 services — have a point of view instead) to avoid blending into the commodity market.

WHAT YOU GET BACK

Narrow Positioning Statement (with rationale) → 3 Proof-Point Formats → About/Manifesto Draft → "What We Deliberately Don't Do" list

09 — QA & Testing

Multi-Perspective QA Checklist (Mandatory Gate for Every Deliverable)

15–20 min

09-qa-testing/multi-perspective-qa-checklist.md

PURPOSE

No deliverable (proposal, ad, landing page, content, report) leaves this agency without passing three independent critique lenses. This is the single mechanism that keeps quality "premium" and consistent, regardless of which AI or freelancer produced the first draft.

WHEN TO USE IT

Every single client-facing deliverable, before it is sent — no exceptions, no matter the deadline pressure.

INPUTS YOU GIVE

- The draft deliverable itself, and its stated goal/audience.

WHAT YOU RUN (the AI is asked to produce)

WHAT YOU GET BACK

Reviewer 1 Notes (Viewer) → Reviewer 2 Notes (Competitor) → Reviewer 3 Notes (Behavioral) → Final Revised Deliverable

Pre-Launch Campaign QA & Platform Compliance Checklist

20–30 min

09-qa-testing/pre-launch-campaign-compliance-checklist.md

PURPOSE

Prevent the two most disruptive operational failures in paid media: ad account suspensions/bans, and disapproved/underperforming launches caused by avoidable errors — both directly threaten a client's revenue and your retainer.

WHEN TO USE IT

Before every campaign launch or major campaign edit — mandatory gate, alongside (not instead of) `multi-perspective-qa-checklist.md`.

INPUTS YOU GIVE

- [PLATFORM] (Meta/Google/LinkedIn/etc.), campaign brief, ad creative, landing page URL, [CLIENT_INDUSTRY] (some industries have extra restricted-category rules — finance, health, alcohol, etc.)

WHAT YOU RUN (the AI is asked to produce)

1. Policy Risk Scan: flag any language, imagery, or targeting choice likely to trigger [PLATFORM]'s ad policy review or restricted-category rules for [CLIENT_INDUSTRY] (e.g., before/after claims in health, guaranteed returns in finance, restricted targeting categories).
2. Landing Page Consistency Check: does the landing page match the ad's claim, offer, and destination exactly (platform policies increasingly enforce ad-to-page consistency)? Flag mismatches.
3. Account Health Checklist: payment method valid, no recent unresolved disapprovals on the account, pixel/conversion events firing correctly (cross-reference with tracking setup), domain verified if required.
4. Launch-Day Checklist: budget caps set correctly, schedule/timezone correct, correct campaign objective selected, UTM parameters applied per governance standard, tracking verified live before spend starts.
5. Rollback Plan: what to do in the first 2 hours post-launch if the ad gets disapproved, the account gets flagged, or performance is wildly off expected benchmarks.

WHAT YOU GET BACK

Policy Risk Scan (flagged items + severity) → Landing Page Consistency Check → Account Health Checklist (Pass/Fail) → Launch-Day Checklist → 2-Hour Rollback Plan

10 — Legal & Compliance

Contracts, IP Ownership & Legal/Compliance Basics

45 min + lawyer
review

10-legal-compliance/contracts-legal-compliance.md

PURPOSE

Protect the agency and the client relationship with clean legal foundations — this is table-stakes for handling ■10L+/month in client budgets and advertiser platform access.

WHEN TO USE IT

Every new client contract, every freelancer/vendor agreement, and annually reviewed for updates.

INPUTS YOU GIVE

- [CLIENT_NAME], [SERVICES_SCOPE], [CONTRACT_LENGTH], [JURISDICTION] (state/country)

WHAT YOU RUN (the AI is asked to produce)

1. Scope of Services & exclusions (what is explicitly NOT included, to prevent scope creep)
2. Payment terms, late payment consequences, and termination for non-payment
3. IP Ownership: who owns creative/campaign work product during vs. after the contract, and treatment of ad account/pixel/domain ownership (recommend client owns their own ad accounts/pixels always - agency manages, doesn't own, platform access)
4. Confidentiality & data handling (especially customer data access)
5. Termination clause: notice period, kill-fee/handover obligations
6. Limitation of liability clause (cap agency liability appropriately)
7. Non-solicitation of agency staff/freelancers by the client (optional clause to consider) Flag any clause that is high-risk to skip in this industry.

WHAT YOU GET BACK

MSA Outline (7 sections listed above), each with a plain-English explanation of why it matters, flagged by risk-if-omitted.

Data Privacy & DPDP Act Compliance (India)

45 min + legal
review

10-legal-compliance/data-privacy-dpdp-compliance.md

PURPOSE

Any agency running email marketing, CRM, retargeting pixels, or lead-gen forms is processing "personal data" under India's Digital Personal Data Protection Act (DPDP Act, 2023) and its rules. This is a current, real compliance obligation, not a hypothetical risk — build it in now rather than retrofit later.

WHEN TO USE IT

Client onboarding (data handling setup), and whenever a new data-collecting asset (form, pixel, CRM import) is added to a client's stack.

INPUTS YOU GIVE

- [CLIENT_NAME], [DATA_TYPES_COLLECTED] (email, phone, purchase history, etc.), [TOOLS_HANDLING_DATA] (CRM, ESP, ad platforms)

WHAT YOU RUN (the AI is asked to produce)

1. Consent Checklist: what needs explicit, specific consent before collection (per DPDP principles: clear notice, purpose limitation, ability to withdraw consent) for each data-collecting touchpoint (forms, cookies/ pixels, WhatsApp/SMS opt-ins).
2. Privacy Notice Essentials: the minimum elements a client's privacy policy/ consent notice should contain to cover the agency's data processing activities on their behalf (purpose, retention, third-party sharing with ad platforms, grievance/contact mechanism).
3. Data Processing Agreement (DPA) Outline: since the agency processes data ON BEHALF OF the client, draft the key clauses a DPA between agency and client should include (data used only for agreed purpose, breach notification timeline, data deletion on contract end, sub-processor disclosure for any tools/freelancers with data access).
4. Data Minimization Checklist: for [DATA_TYPES_COLLECTED], flag anything being collected that isn't actually necessary for the stated marketing purpose (a common, easily-fixed compliance risk).
5. Breach Response Outline: first-24-hours steps if client customer data is exposed (containment, assessment, notification obligations) — cross- reference with `11-incident-response`.

WHAT YOU GET BACK

Consent Checklist by Touchpoint → Privacy Notice Essentials List → DPA Clause Outline → Data Minimization Checklist → Breach Response Outline

11 — Incident Response

Incident Response Playbook

15–20 min

11-incident-response/incident-response-playbook.md

PURPOSE

When something breaks — ad account suspended, website down, data exposure, a campaign goes viral for the wrong reason — the first hour of response determines whether it's a manageable event or a client-relationship-ending one. This skill gives you a calm, pre-built process instead of improvising under pressure.

WHEN TO USE IT

Immediately upon discovering any of: ad account suspension/ban, site/landing page downtime, data breach/exposure, PR-negative viral moment, major campaign performance collapse, or a critical tool/integration failure.

INPUTS YOU GIVE

- [INCIDENT_TYPE], [CLIENT_NAME], [WHAT_HAPPENED — facts only], [TIME_DISCOVERED]

WHAT YOU RUN (the AI is asked to produce)

1. First-Hour Actions: an ordered checklist of what to do immediately (contain the issue technically first, THEN communicate — don't reverse this order) specific to [INCIDENT_TYPE].
2. Client Communication Script: a message to send the client within the first hour — transparent about what's known/unknown, what's being done, and next update time. Never speculate on cause before it's confirmed.

3. Root Cause Investigation Checklist: what to check to understand why this happened, specific to [INCIDENT_TYPE].
4. Follow-Up Communication Template: for once the issue is resolved — what happened, what was done, what's changed to prevent recurrence (a credible "post-mortem" builds more trust than the incident itself damages, if handled well).
5. Internal Process Fix: what should be added to relevant checklists (`09-qa-testing`, tracking setup, etc.) so this specific failure mode is caught earlier next time.

WHAT YOU GET BACK

First-Hour Action Checklist → Client Communication Script (initial) → Root Cause Checklist → Resolution/Post-Mortem Communication Template → Process Fix Recommendation

5. Full Worked Example — Client “GlowNest Skincare”

A fictional client run start-to-finish, showing exactly what Smart Pursuit feeds into the AI, what comes back, and how long each step realistically takes. Use this as the template for every real client.

Client profile: GlowNest — a D2C skincare brand, Rs. 8Cr annual revenue, wants to scale beyond Instagram-only marketing. Found via LinkedIn (buying signal: recently hired a “Growth Manager”). Target retainer: Rs. 2L/month (SEO + Paid Media + Social + Content).

STAGE 0 — Pipeline: Lead Generation & Prospecting

Skill: 01-sales-bd/lead-generation-prospecting.md | Time: ~25 min

Inputs filled in:

Niche: D2C skincare | ICP: Rs. 5–15Cr revenue | Geography: India (metro) | Service focus: Full-funnel

What comes back:

Buying-signal matrix (funding news, new growth hires, site-speed complaints), 3 outreach variants, a weekly cadence.

What we actually do:

Spot GlowNest's “Growth Manager” job post as a live buying signal; send outreach variant referencing it specifically.

STAGE 1 — Discovery Call & Diagnostic

Skill: 01-sales-bd/discovery-call-diagnostic.md | Time: 15 min prep + 30–45 min call

Inputs filled in:

Prospect: GlowNest | Website + Industry: D2C Skincare

What comes back:

10-question discovery script, 3 diagnostic questions (e.g. “Who owns your customer data, can you segment by LTV?”), a closing script pitching a paid Strategic Audit instead of free work.

What we actually do:

Run the call. Confirm founder holds budget authority (no red flags). Client agrees to a Rs. 25,000 paid audit.

STAGE 2 — Strategy: Brand, Market & Competitor Audit

Skill: 03-strategy-discovery/brand-market-competitor-audit.md | Time: 75–90 min

Inputs filled in:

Client + website + industry + 3–5 real competitor URLs

What comes back:

Brand Positioning Snapshot, Competitor Teardown, White Space Analysis, 3 customer personas, one Recommended Strategic Angle. Finding: competitors all lead with “clean beauty” (crowded); white space = “skin barrier science,” which matches GlowNest's actual strength.

What we actually do:

Independently verify 2–3 competitor claims via web search before trusting them. Package as the paid audit deliverable — this justifies premium pricing next.

STAGE 3 — Proposal, Pricing & Quoting

Skill: 01-sales-bd/proposal-pricing-quoting.md | Time: ~40 min

Inputs filled in:

Client, industry, discovery + audit notes | Budget: Rs. 1.5–2.5L/mo | Services: SEO+Paid+Social+Content | Timeline: 90-day

What comes back:

Situation Summary, sharp Core Problem (“GlowNest is fighting for attention inside a crowded message when its real differentiator — skin barrier science — is invisible”), 3-Phase plan, 3-tier pricing (Rs. 1.5L/Rs. 2L/Rs. 2.8L), Why Us, single CTA.

What we actually do:

Send through the mandatory QA gate (Stage 3.5) before it reaches the client.

STAGE 3.5 — Mandatory QA Gate

Skill: 09-qa-testing/multi-perspective-qa-checklist.md | Time: 15–20 min, fresh session

Inputs filled in:

The full proposal draft + stated goal + audience description

What comes back:

Viewer Lens flags a generic “Why Us” line → rewritten around the skin-barrier insight. Competitor Lens flags a generic-looking 90-day plan → tightened to name the white-space angle. Behavioral Lens flags two competing CTAs → trimmed to one.

What we actually do:

Send the revised proposal.

STAGE 4 — Negotiation & Closing

Skill: 01-sales-bd/negotiation-closing.md | Time: ~10 min

Inputs filled in:

Objection: “Can you do Rs. 1.5L for the full Rs. 2L scope?” | Deal value Rs. 2L/mo | Margin floor Rs. 1.7L/mo

What comes back:

A script that trades scope for price instead of discounting outright — phases Paid Media into month two instead of cutting the rate.

What we actually do:

Send it. GlowNest agrees to Rs. 2L/month, full scope, starting next month.

STAGE 5 — Onboarding, Contracts & Kickoff

Skill: 02-client-onboarding/onboarding-contracts-kickoff.md | Time: ~40 min

Inputs filled in:

Client, scope, Rs. 2,00,000/mo retainer, start date, POC (Founder + Growth Manager)

What comes back:

7-day onboarding checklist, kickoff agenda, secure access-request checklist, the “Working Together” one-pager.

What we actually do:

E-sign the contract, collect 50% advance, run the kickoff call.

STAGE 6 — Tracking & Measurement Setup

Skill: 04-service-delivery/tracking-measurement-infrastructure.md | Time: ~75 min, one-time

Inputs filled in:

Website, platforms (GA4, Meta Pixel, Google Ads, Shopify), key conversions (Purchase, Add to Cart, Signup)

What comes back:

Tracking audit checklist, UTM naming convention, conversion definition doc (Shopify = source of truth), a discrepancy-explanation script.

What we actually do:

Personally verify GA4/Pixel events fire correctly before any campaign launches — the one step AI cannot verify.

STAGE 7 — Service Delivery: Month 1 Planning

Skill: SEO, PPC, Social, Content skill files | Time: 45–60 min each

Inputs filled in:

Target keywords, Rs. 60K ad budget split Meta+Google, brand voice, content topics from SEO gaps

What comes back:

SEO 90-day roadmap; campaign architecture + creative briefs; content pillars + 30-day calendar; content matrix + 3 briefs.

What we actually do:

Every output passes the QA gate before scheduling — ad claims get a compliance check too (Stage 8).

STAGE 8 — Pre-Launch Campaign Compliance Check

Skill: 09-qa-testing/pre-launch-campaign-compliance-checklist.md | Time: ~25 min

Inputs filled in:

Platform (Meta), ad creative/copy, landing page URL, industry (skincare)

What comes back:

Flags “clears acne in 7 days” as a likely policy/legal overreach for a cosmetic product → rewritten to “supports visibly clearer skin with consistent use.” Confirms landing page match and pixel firing.

What we actually do:

Fix the flagged copy before launch — likely prevents a disapproval or a compliance issue.

STAGE 9 — Monthly Reporting

Skill: 04-service-delivery/analytics-reporting.md | Time: ~40 min

Inputs filled in:

Services delivered, key metrics, raw GA4/Ads/Shopify data

What comes back:

Executive summary leading with the number that matters (“2.8x ROAS vs 3x target, driven by retargeting”), channel breakdown with insights, changes made, next month’s focus, one proactively flagged risk.

What we actually do:

Verify every number against the live platform before sending — never send an unverified AI-drafted figure.

STAGE 10 — Quarterly: Retention & Upsell

Skill: 07-retention-growth/client-retention-upsell-qbr.md | Time: ~75 min/quarter

Inputs filled in:

One quarter of data, current scope, an unmet need (e.g. unused, growing email list)

What comes back:

QBR outline (honest wins + misses first), an upsell framed as solving a problem (“your list has tripled and isn’t monetized”), 5 churn early-warning signs.

What we actually do:

Present wins/misses honestly before pitching the upsell — never in the same breath as bad news.

Ongoing, In the Background (Stage 11)

Regardless of any single client’s cycle, Smart Pursuit runs these monthly across the whole portfolio: **Project Management (SDLC cycle)** to keep client calendars from colliding, **Agency KPI Dashboard** to watch client-concentration risk, and **Invoicing & Payments** for monthly billing. **Situational skills** — Incident Response, Difficult Client Conversations, and Data Privacy/DPDP — are triggered only when needed, not run on a fixed schedule.

6. Time Budget — What Running This System Costs You

Phase	One-Time (per new client)	Recurring (per month, per client)
Sales → Close (Stages 0–4)	~2–2.5 hours total	—
Onboarding + Tracking Setup (5–6)	~2 hours total	—
Service Delivery Planning (7)	—	~3–4 hours/month
QA Gates (3.5 & 8, repeated)	—	~1–1.5 hours/month
Reporting (9)	—	~40 min/month
Retention/QBR (10)	—	~75 min/quarter (~25 min/mo avg)
Ops/Finance (11)	—	~30 min/month

Realistic total: ~6–7 hours/month of direct hands-on time per Rs. 2L/month client once onboarded (excluding actual campaign execution/content production, which varies by scope and what's delegated to freelancers via the Team/Freelancer/Vendor Management skill). This is the math behind why a **3–5 client, Rs. 10L/month portfolio** is realistic for Smart Pursuit as a lean operation — AI does the drafting and structuring; the operator's hours go to judgment, verification, and the client relationship.

7. What to Build Next

The core lifecycle is now covered end to end — Sales, Onboarding, Strategy, Delivery, Operations, Finance, Retention, QA, Legal, and Incident Response. The next layer worth building, once Smart Pursuit has 2–3 real clients and a clear niche, is:

- **Industry-specific playbook variants** — a D2C e-commerce version vs. a B2B SaaS version of the SEO/PPC/Content skills, since buyer psychology and channels differ meaningfully.
- **A recurring pattern log** — track recurring flaws the QA gate catches (vague CTAs, generic hooks) and feed them back into the relevant skill's Premium & QA Notes so first drafts improve over time.
- **Case studies from real engagements** — once GlowNest-style engagements are real, use the Case Study & Portfolio Building skill every month, not just when a big result happens.
